

DLOV Series

De Lama DLOV are the most versatile steam autoclaves designed to meet the widest requirements of the Pharmaceutical Industry. Sterilizer incorporate a high degree of operational flexibility that enable them to be used even for a wide range of industrial and laboratory application.

For treatment of materials widely used in the pharmaceutical, biotechnology, chemical, cosmetic and food industry, in laboratories and in research institutes.

Horizontal steam autoclaves.

Possibility of realization for optional operation even by air/steam mixture (DLOV-AV type).

Thanks to high flexibility in design, layout configuration, chamber sizing and load handling systems, sterilizer DLOV can be offered in order to conform any specific requirement and Meet User's production "critical load". Autoclaves components are of the highest quality and reliability, worldwide available for easy replacement and assure the equipment longest lifetime.

Standard and customized models.

Sizes available from 80 lts. to 30,000 lts.

In compliance with :

cGMP, FDA, GAMP, EN 285, EMC 89/336/EC, 93/68/EC, 73/23/EC, PED 97/23/EC.

Main applications :

- Empty glassware (e.g. vials, ampoules, bottles)
- Stoppers
- Inox equipment and instruments
- Inox machine parts
- Empty containers
- Filters and accessories
- Rubber materials
- Textiles
- Liquid solutions and culture media in sealed or unsealed containers (e.g. vials, bottles, ampoules)
- Plastic materials (able to withstand usual temperatures for saturated steam sterilization)
- Animal cages

DLOH Series

For treatment of materials widely used in the sanitary/hospital sector.

Horizontal autoclaves.

Freestanding version.

Automatic control programmes in compliance with European Standard EN 285 (air leakage test, Bowie & Dick test, air detector test, Helix test).

Standard models with available sizes from 80 lts. to 2,000 lts.

In compliance with:

cGMP, GAMP, EN 285, EN 554, EN 556, 93/42/EC, EMC 89/336/EC, 93/68/EC, 73/23/EC, PED 97/23/EC.

Main applications:

- Porous textiles (e.g. garments, clothes, gauzes, bandages, etc.)
- Unporous solids (e.g. surgical instruments, empty glassware, etc.)
- Thermolabile products (e.g. gloves, catheters, etc.)
- Empty containers
- Rubber materials
- Plastic materials (able to withstand usual temperatures for saturated steam sterilization)

DLOH-B Series

For treatment of materials widely used in the sanitary/hospital sector.

Table-top autoclaves.

Automatic control programmes in compliance with European Standard EN 285 (air leakage test, Bowie & Dick test, air detector test, Helix test).

Standard models with available sizes from 80 lts. to 2,000 lts.

In compliance with:

cGMP, GAMP, EN 285, EN 554, EN 556, 93/42/EC, EMC 89/336/EC, 93/68/EC, 73/23/EC, PED 97/23/EC.

Main applications:

- Porous textiles (e.g. garments, clothes, gauzes, bandages, etc.)
- Unporous solids (e.g. surgical instruments, empty glassware, etc.)
- Thermolabile products (e.g. gloves, catheters, etc.)
- Empty containers
- Rubber materials
- Plastic materials (able to withstand usual temperatures for saturated steam sterilization)

DLOD Series

For treatment of materials widely used in microbiological laboratories and for specific treatment of high pathogenic risk (HP) materials and wastes from infectious disease wards.

Horizontal autoclaves.

Possibility of realization for operation even by air/steam mixture (DLOM-HP type) for specific treatment of wastes and high pathogenic risk materials (e.g. production of vaccines/serums, diagnostic and biotechnological products, materials outgoing from infectious diseases areas).

Standard and customized models.

Sizes available from 80 lts. to 4,000 lts.

In compliance with:

cGMP, FDA, GAMP, EMC 89/336/EC, 93/68/EC, 73/23/EC, PED 97/23/EC.

Main applications :

- Empty glassware (e.g. vials, ampoules, bottles)
- Stoppers
- Inox equipment and instruments
- Inox machine parts
- Empty containers
- Filters and accessories
- Rubber materials
- Textiles
- Liquid solutions and culture media in sealed or unsealed containers (e.g. vials, bottles, ampoules)
- Plastic materials (able to withstand usual temperatures for saturated steam sterilization)

DLOM Series

For treatment of materials widely used in microbiological laboratories and for specific treatment of high pathogenic risk (**HP**) materials and wastes from infectious disease wards.

Horizontal autoclaves.

Possibility of realization for operation even by air/steam mixture (**DLOM-HP** type) for specific treatment of wastes and high pathogenic risk materials (e.g. production of vaccines/serums, diagnostic and biotechnological products, materials outgoing from infectious diseases areas).

Standard and customized models.

Sizes available from 80 lts. to 4,000 lts.

In compliance with :

cGMP, FDA, GAMP, EMC 89/336/EC, 93/68/EC, 73/23/EC, PED 97/23/EC.

Main applications:

- Empty glassware (e.g. vials, ampoules, bottles)
- Stoppers
- Inox equipment and instruments
- Inox machine parts
- Empty containers
- Filters and accessories
- Rubber materials
- Textiles
- Liquid solutions and culture media in sealed or unsealed containers (e.g. vials, bottles, ampoules)
- Plastic materials (able to withstand usual temperatures for saturated steam sterilization)
